

## Guidance

**Audience:** Someone who knows nothing about your topic.

**Writing:** You may use GenAI to write this content but cite where it was generated.

**Media:** Sounds, videos, animations, and other media are allowed. You must have permission to use every media item you use. Include a small credit with each media item.

**Images:** Use only photos you take, public domain, royalty-free, permission-granted, or AI-generated images. You must have permission to use every image you use. Include a small credit with each image.

## Content Requirements

**Title:** Name the project. Something interesting!

**Description Tagline:** A one-sentence teaser description.

**Team:** The names of your team members.

### Overview of the Problem or Opportunity

Include visuals (images, illustrations, charts, video, etc.) and writing. Use paragraphs and bullet points to make the information easy to read for viewers who are new to the topic.

For the overview:

- **Subhead:** A title for the section
- **Description Tagline:** A one-sentence teaser description
- **The Problem or Opportunity:** The issue where Humans+AI will be implemented
- **Need for the Future:** What your team proposes "needs to happen" to improve the future
- **Process:** Key elements of your process that tell how you innovated with AI

**The Problem or Opportunity** (no more than 500 words, at least three images)

What is the event/problem/opportunity? Describe it so other students can understand its parts. Where does it take place? What subject areas does it impact, and how? Discuss how the problem/opportunity is important and meaningful. Share who it affects, for good or bad. Share how AI is currently used or misused here.

**Need for the Future** (no more than 200 words, at least one image)

What is a preferable future? What should happen? What negatives should be reduced, and what positives should be enhanced? Why should we care about this need and these improvements?

**Process** (no more than 300 words, at least one image)

Share how you used AI to do this work. Share details about the analysis process, such as your disruptive hypotheses or SWOT. Show off how you created two alternate realities where Humans are better because they were plussed with AI.

### Two possible alternate realities (futures).

Include visuals (images, illustrations, charts, video, etc.) and writing. Use paragraphs and bullet points to make the information easy to read for viewers who are new to the topic.

For each reality:

- **Subhead:** A title for the reality
- **Description Tagline:** A one-sentence teaser description
- **AI Agent Details:** Its role, what it will do
- **Human+ Details:** Their role, what they will do
- **Product Prototype:** A product, service, or system that Humans+AI will produce
- **Broader Impact:** Ripple effects that result from use

**AI Agent Specifics** (no more than 300 words, at least one image)

How will the AI be used? What will it produce? What are the intended consequences of this use? What are the unintended consequences? Who and what does its use impact most? How will it save time/resources? What advances will come from its use?

**Human+ Specifics** (no more than 300 words, at least one image)

What will people do now that AI is in place? What are peoples' roles in this interaction? How will people limit the potential harm of this use? What will people gain from this use? What will people be able to do with the advances made by AI?

**Product Prototype** (no more than 300 words, at least three images)

Create images, audio, sound, drawings, source code, etc., that represent the product, service, or system that Humans+AI will create. For services, show a sequence of images, storyboards, or other outcomes that show how it will function.

**Broader Impact** (no more than 300 words, at least one image)

How will this new Humans+ reality affect other subject areas, industries, art forms, relationships, leisure, countries, the environment, etc? Think social, technological, environmental, economic, and political shifts.
